

Automation

your capacity for success

At CRIQ we take pride in our client's successes. Our core expertise is in designing, building and integrating value-added equipment to automate your manufacturing processes, making them more efficient, safer, and more profitable. We combine the best in robotics, artificial vision and statistical process control, with a thorough understanding of the need to maximize your return on investment.

Our 325 employees are dedicated to analyzing your processing requirements. Understanding your goals. Then coming up with the solution that works. For industries that are familiar with the advantages of high-tech, and for those to whom robotics is brand new.

We have 30 years' experience in plant floor innovation. Our clients consistently:

- Achieve remarkable levels of quality.
- Dramatically reduce labor requirements.
- Expand into new markets.

Clients also benefit from our on-going research: Part of our 20,000 square foot production floor has been given over to R&D in automated deburring, grinding and polishing.

Deliver Faster...

From de-boning pork bellies to assembling and inspecting parts, CRIQ can create a robotic system to get your product to market faster.

ROI Sooner...

A 98% + running efficiency and our reputation for on-time delivery give our clients the results they want.

...With Value-Added Efficiency.

Whether you're zooming in to 1/10,000th of an inch, or flying at 40,000 feet, you'll produce a more consistent product faster, with great reductions in errors and tremendous savings in labor.

We fully support our solutions with documentation, installation and start-up assistance, training, online support and remote software upgrades.

Because when you're looking to the future
you've got to keep an eye on the bottom line too.
